NINO III

ultra-compact, fully adjustable
POS system

Ultra-small & flexible POS system

Equiped with a Elkhart Lake J6412 processor, **NINO III** offers additional power and reliability. With its sleek modern appearance and capabilities, it is an ultra-compact, fully adjustable POS, with the specificity of being able to fold flat, perfectly suited for most retail and point of service sectors.

This system has a 14 inch 16:9 format style touchscreen and is designed to be no bigger than a small desktop, with full POS functionalities. Thanks to its completely flexible and adjustable swing arm, which is attached to the die-cast aluminium base (integrating power supply), it can be folded flat or adjusted to all viewing angles from flat to 90°. This means it can be used «flat» like a console, on its base, or mounted on a wall or pole (several mounting accessories, as well as VESA fixings, are available).

Fanless, NINO III is perfect for harsh environments and always in tune with the new standards (low energy consumption and small carbon footprint).

It is the ideal companion for all pop-up stores and shops, for take away food and sales (food & catering trucks, mobile canteen) and non-food specialists as well.
